

Get Comprehensive Population Health Management from Custom Design Benefits

Bridge the gap in your employees' care with Custom Care, our Population Health Management Program

At **Custom Design Benefits**, we offer population health management that identifies at-risk individuals through predictive modeling by assessing hospital and emergency department utilization risk scores. We use medical and pharmacy claims to predict an individual's current and prospective risk. These scores are then used by our team to identify employees most likely in need of a personal health management program to keep them healthier.

Custom Care Benefits:

Reduce gaps in care

Fewer emergency room visits

Decrease high cost hospitalization rates

Avoid healthcare cost increases

Contact **Custom Design Benefits** to learn more about our population health management.

Our Case Management Turns Insights Into Action

To truly improve an employer's population, identifying gaps in care isn't enough. You need a partner that is capable of implementing personalized outreach programs and proactively managing your group's risk.

Custom Design Benefits provides case management services to work with individuals on their care plan—without any added costs to your employees.

Your Nurse Case Manager Can:

- Help find a provider
- Identify any gaps in care or healthcare requirements
- Access resources to help with special healthcare needs
- Assess eligibility for services
- Suggest additional solutions, such as local and social services
- Work with your primary care provider, family members, and other caregivers
